

# LOST CONTROL OVER THE WHEEL?

Take back control with  
the **GRiP Road Check**.

# SAFE TRAFFIC through good road management

## WHAT ARE YOU DOING TO ENSURE SAFE TRAFFIC?

### AS ROAD CONTRACTOR:

- ✓ deliver professional work
- ✓ guarantee quality

### AS ROAD MANAGER:

- ✓ inspect the roads
- ✓ commit to timely maintenance

### AS ROAD USER:

- ✓ you wear a seatbelt
- ✓ use a safe and approved vehicle
- ✓ follow the traffic rules

## WHAT COULD STILL HAPPEN NOW?

More than you think. Because the real danger cannot be seen with the naked eye. If the skid resistance of the road surface is not up to standard, this results in life-threatening situations. Situations that cost lives or have major financial consequences. Situations that you as road manager, road builder, insurer and road user want to avoid.

## BUT HOW DO YOU DO IT?

To measure is to know. Cracks and holes in the road surface can be seen with the naked eye, but not the skid resistance. With the GRiP Roads Check, we measure the skid resistance of the road surface. We do this with the latest techniques, such as the SideWay Force measurement. Of course, we comply with the European directives and are fully certified.

## WHEN TO MEASURE?

We prefer to measure preventively. With the GRiP Road Check you can prevent dangerous situations. We measure part of the road network every year and advise on the measures to be taken.

We also take measurements after the fact, if a lot of accidents happen on a particular road surface. Or if the skid resistance may have played a role in an accident. As a road user, but certainly also as a road manager, road builder, insurance company or lease company, you want to know who is liable in such cases.

## WHY THE GRiP ROAD CHECK?

- Feasible measurements
- Certified experts and the latest equipment
- Extensive and honest advice for now and later
- Digital work, so less time and less paper
- We arrange everything!

## EVEN MORE GRIP ON THE CASE

### Road inspections:

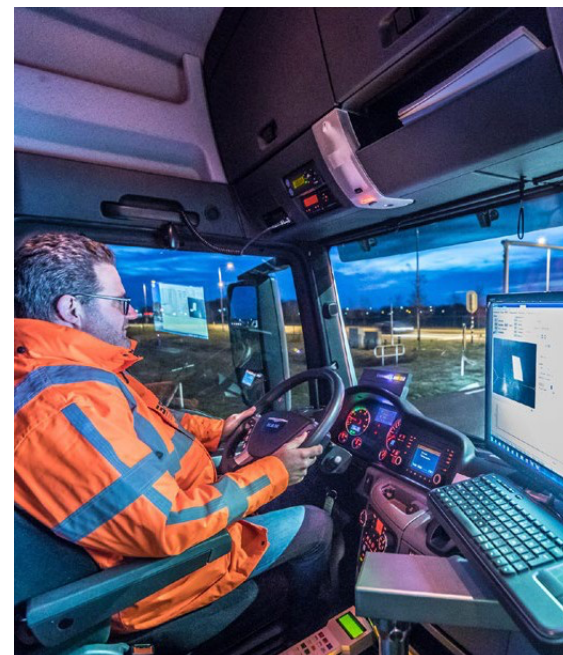

Sometimes more is needed. GRiP therefore also provides:

- Visual road inspection
- Longitudinal flatness measurement
- Marker measurement
- Noise Measurement
- Property inspection
- Damage assessment
- 360° camera images
- Fall weight deflection measurement

### Traffic Control:

A road surface measurement must, of course, take place under safe conditions.

In most cases this can be done without traffic disruption. However, if extra measures are required, such as road closures, GRiP will also take care of that.

**"IF YOU SAY YOU ARE DOING EVERYTHING YOU CAN TO MAKE TRAFFIC SAFER, THEN YOU CANNOT IGNORE THE SKID RESISTANCE OF THE ROAD SURFACE"**

*Bastiaan Seijnaeve,  
Senior road manager municipality of Arnhem*
